SUBJECT: Mitec System' Site Plan For Discharge Of Hot Water

Dear Mr. Balintineti:

I have enclosed the proposed site plan for discharge into a dry well for hot water which is used for drying parts. The water is virtually free of any chemicals.

The tank that holds the hot water is heated in order to maintain a temperature of approximately 150°F. It is necessary to change this water daily for maintenance purposes.

The water is available for analysis at any time, and I am sure there are no contaminants in it.

With your approval, we would like to start working on the problem. Thank you for your assistance. If you have any questions, please contact me at (802) 864-0068.

With Best Regards,

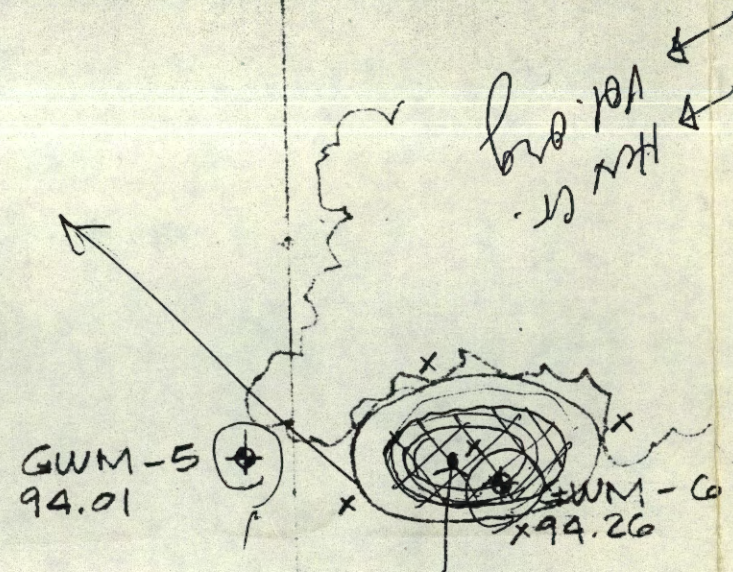

David Gee
Operations Manager
